

# Government Grievance Portal: Project Documentation

## Module 2: Features & User Flow

Mankaran Singh Tandon (UID: 23BCS10204)

Section: KRG2B

Course: Full Stack Development (PBLJ / Web Technologies)

### 4. Features

The portal's features are segregated by user roles to ensure appropriate access and functionality for citizens, administrators, and super-admins.

#### Citizen Features

- **Authentication:** Secure registration and login functionality for all citizens.
- **Grievance Submission:** An intuitive form to submit new grievances, specifying the relevant department and providing a detailed description of the issue.
- **Document Attachment:** Ability to attach supporting documents (such as images, screenshots, or PDFs) to a grievance to provide context and evidence.
- **Status Tracking:** A personal dashboard to track the real-time status of all submitted grievances (e.g., "Pending", "In Progress", "Resolved").
- **Feedback Mechanism:** The ability to provide feedback or a satisfaction rating once a complaint has been marked as resolved by an administrator.

#### Admin/Authority Features

- **Management Dashboard:** A centralized dashboard to view, filter, and manage all complaints pertinent to their specific department.
- **Complaint Assignment:** Ability to assign specific complaints to relevant officers or sub-departments for investigation and resolution.
- **Status Updates:** Authority to update the status of a grievance as it moves through the resolution process, keeping the citizen informed.
- **Resolution:** Functionality to mark complaints as "Resolved" and provide a closing statement or report detailing the actions taken.

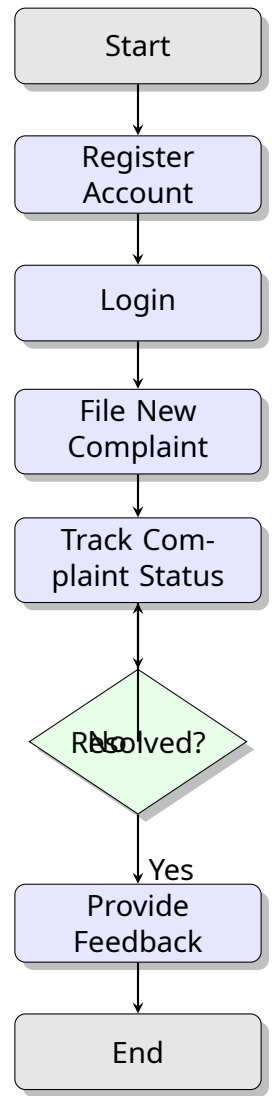

#### Super Admin Features

- **User Management:** Full control over all system user accounts, including the ability to create, edit, or remove Admin and Officer accounts.
- **Department Management:** Ability to create, edit, and delete the government departments that citizens can select from when filing a grievance.
- **Overall Analytics:** Access to high-level analytics, system-wide reports, and performance metrics to oversee the portal's efficiency.

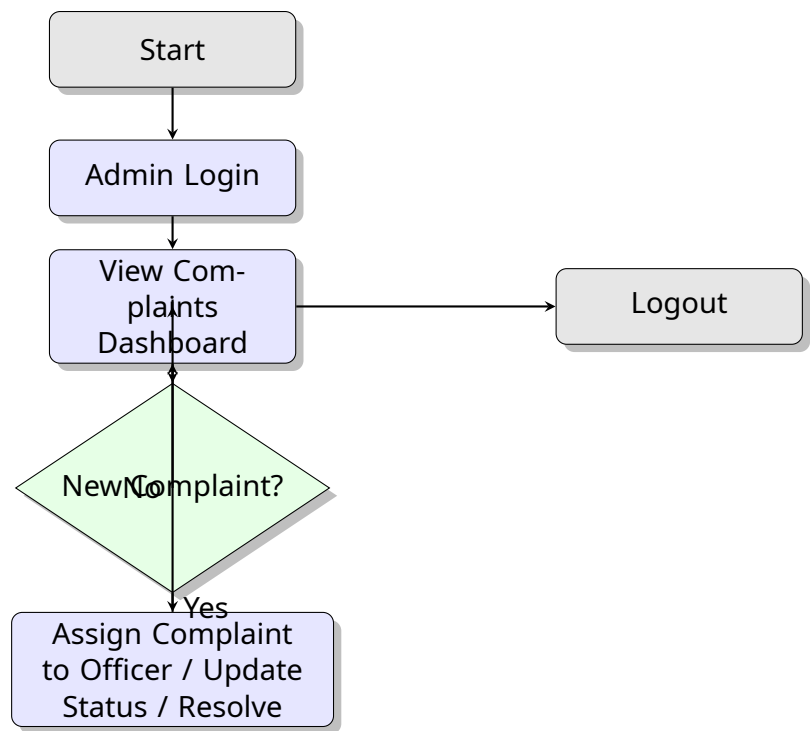

# 8. User Flow

The following diagrams illustrate the typical interaction flow for each user role within the portal.

## Citizen User Flow

**Admin/Authority User Flow**

**Super Admin User Flow**
